

# **Adult Caddisfly Occurrence Scheme**

**2008**

**Stuart M Crofts**

# Adult Caddisfly Occurrence Scheme

## **Background**

For as long as I can remember I have had an interest in insects, as a boy I would spend my summer holidays catching butterflies, hunting down grasshoppers and feeding hapless flies to hungry spiders. When I started fly-fishing detailed study of the insects that the fish I was trying to catch actually fed on, was for me, a natural development. I have since spent many years collecting and studying the mayflies (Ephemeroptera) and stoneflies (Plecoptera). With the mayfly species I was especially keen to try and understand the different ways these enigmatic creatures transform from the nymph stage to the adult dun stage (subimagines). Obviously, knowledge from this has helped my fly-fishing.

In more recent years my curiosity started to turn to the world of caddisflies (Trichoptera) but my fly-fishing books had only the briefest of information and I wanted to know much more. Since 1993 I have had the great fortune to fly-fish with various fly-fishing teams representing England, as a result I have fly-fished in many different countries. During my travels and fishing at these events I have met with anglers from all over the world who also have a keen interest in the entomological side of the sport. From these meetings it soon became obvious that, with the adult caddisflies especially, our understanding (the UK fly-fisherman's that is) was full of huge gaps.

In the spring of 2006 I had a letter printed in Fly-Fishing & Fly-Tying, a popular and informative UK based fly-fishing magazine. In this letter I appealed for help from the readers, I needed them to catch and send me any adult caddisflies they came across whilst out fishing. My idea was then to identify these specimens and create a database of where & when our different adult caddisfly species are on the wing, the aim being to get a better understanding of adult caddisflies and their relationship with the sport of fly-fishing. This was the birth of the Adult Caddisfly Occurrence Scheme.

Since the scheme started I have had numerous samples sent in and the database has grown steadily. I have also enrolled other "collectors" (who are not anglers); these have included my family & friends and members of various local natural history societies. To be honest anyone who has shown even the slightest interest has been roped in! This has expanded the areas from which I receive samples to beyond that of the fly-fishing related sites, as a result, an even greater variety of species are now starting to come through.

Each year all the data is sent on to Dr. Ian Wallace (from The National Trichoptera Recording Scheme), the Natural History Museum, the Freshwater Biological Association, the River Fly Partnership, Buglife, my local natural history society, all those who send in samples and anyone else who just asks.

## **2008 Results**

What a strange year 2008 turned out to be, the weather never did settle down in the summer and then winter came early. However, despite the mixed weather the caddisflies had to carry on with their lifecycles. I have had many samples sent and also managed plenty of collecting trips of my own. The number of samples sent in and analysed was almost double those from 2007.

Every single adult caddisfly sample is important to the scheme but I would like to make special mention to Heather Olsen and Stephen Moores who supplied very regular samples from their own local areas throughout 2008. You will see very many entries with these two names alongside.

Another special thanks must go to Andrew Dixon. Andrew, one of my best friends and fellow England International fly-fisherman has taken a particularly keen interest in the scheme once again during 2008. This is very fortunate for me, not only is Andrew a great collector he can also identify the adults to species level. His main interest is recording aquatic insects from the River Eden (in Cumbria) and its tributaries, not just caddisflies but mayflies and stoneflies too. When I was snowed under with samples Andrew volunteered to help me out with the identification and you will see his initials (AD) many times in the "determiner" column.

The first samples of 2008 came in from Cornwall, this also happened in 2007 and 2006. Not that surprising as spring down there is usually a week or two in front of the rest of us. The samples then came in steadily up to the end of November, again as expected. The 2008 data is made up with caddisflies from 86 different species, a fantastic effort from everyone involved.

On the 2008 chart the first two columns show the *genus & species* of the samples. The next two columns are the approximate *location* and National Grid Reference (*NGR*) of where a sample was caught. In the next column is the *date* that the sample was caught; if more than one sample of a species is recorded then the dates are shown from the earliest down to the last record of that species. The next column is the *determiner*, here are the initials of the person who identified the sample; in the case of this 2008 data it is either SC for Stuart Crofts or AD for Andrew Dixon. Next is the name of the *sample supplier*, so if you sent in a sample during 2008 your name will be somewhere in this column. The last column is for *brief notes* about the sample and its capture.

I have also put all the information on a CD-ROM, this has given me the opportunity to present the data on even more charts, in full colour, with far more detailed notes and with photographs of a good number of the species. Copies of the CD-ROM are available for £5.00. Money raised will go towards the funding of the 2009 scheme. If you would like a copy of the CD-ROM just post me a cheque (made payable to Torrentis Products) with your name and address and note requesting the CD.

Last, but by no means least, a huge thank you to everyone who has sent in samples, without you the scheme simply would not exist.

Stuart M Crofts, January 2009

### Adult Caddisfly Occurrence Records 2008

Genus	Species	Location	NGR (where known)	Date	Determiner	Name of Sample Supplier	Brief Notes (when taken)

## Adult Caddisfly Occurrence Scheme 2009

- If you are already a collector and want to continue to do so during 2009 you do not have to do anything other than just read the notes below as a reminder of how to deal with any samples you get.
- If you are not yet involved with the scheme but would like to take part then please drop me an email (or a letter) so I can send you some collecting tubes and simple instructions.
- If you no longer want to be part of the scheme then please return any tubes you have not used with a note and I can remove your details from my database.

## Adult Caddisfly Collecting Notes 2009

If you get any adult caddisflies (but not the larvae) just put them into a tube. As soon as possible put this into a domestic deep freeze for about 2 or 3 minutes. This is considered a humane way to immobilise/kill an adult caddisfly, but **please** don't leave them in too long as they will drop to bits! Next, fill the tube with either neat vodka (or similar such as gin), or a 50/50 mix of isopropyl alcohol and water, any of these will preserve the caddisflies until they can be identified. Please do not use neat isopropyl alcohol or surgical spirit as this desiccates the caddisfly making it very difficult to work with while trying to confirm its identity.

Write on a small slip of paper (see example below) in pencil, *where* (the approximate location) and *when* (the time & date) you caught the sample along with your *name*. Put this in the tube with the caddisfly samples (alcohol will have no effect on either the paper or writing in pencil). Please do not stick a label on the tube as these, often, just fall off.

Drop the tube back in the post to me with your name and address along with any other notes of interest on the capture. I can then post back another empty tube in return. You can put the tube in any type of envelope, they do not need to be padded, these tubes are very strong and will not leak. However, you will need to put a "large letter" stamp on the envelope due to its thickness with a tube enclosed.

I do not get much chance to analyse samples until the long winter evenings, hence the reason to preserve them in alcohol.

You can expect many different types of adult caddisfly to be on the wing from mid March to the end of November. They range in size from 3mm to nearly 30mm and we have almost 200 very varied species, most are found near water but they can turn up anywhere, some are very common and others incredibly rare. So, even if you only think you have one please send it along for me to check. Plus, don't worry if you think you have caught the same type twice, again please send it along as this information is useful for the "flight period data".

At the year-end and after all the samples have been identified I will put together an annual review. A copy of the review and data will then be sent to you, from this you will be able to see the species you caught and sent in.

Thank you.

Sample of an "information slip" to put inside a tube with specimens:

River Trent, Newark, Notts. NGR SK 792 536 0900hrs 15 July 08, Fred Smith
--

You can put several caddis samples in one tube as long as they are from the same venue. Please do not forget to use pencil (ink dissolves in alcohol!)

### **Using the Ordnance Survey Web Site**

It is preferable (but **not** essential) to send along a six figure National Grid Reference (NGR) along with the approximate sample location name.

To check you have worked out more-or-less the correct locations of a sample you are sending just go to the website:

[www.ordnancesurvey.co.uk/oswebsite](http://www.ordnancesurvey.co.uk/oswebsite)

Now, type in the box on the webpage what you think is the Grid Reference, and click GO. This will show the actual location of what you have entered in the centre of the map shown, you can see from this if you have got the NGR about right.

As an example try putting in: *SE246033* (please note there is no "space" between the prefix letters or the two 3 digit numbers) and click GO.

You should see Penistone Church slap bang in the middle of the map shown.

Therefore, if this was an area a caddisfly was caught the location would be; *Penistone Church, Penistone, S. Yorks* with the NGR *SE246033*

This website can also help in finding a NGR. Just type in the nearest place name into the webpage box and then press GO. You can then move the map around until the approximate area you caught the Caddisfly is in the centre of the map on your screen. Underneath the map, in the text, it will tell you what the NGR is at that point.

All very useful.

Have fun Mapping!
